

# Be surprised how easy it is to protect your healthcare organization against email threats

As a healthcare provider, your sensitive data is a natural target for bad actors. As email threats increase and evolve, there's an urgent imperative to bolster your email security to protect your patients and your organization - without disrupting your medical staff and administrators.

## Email is your soft underbelly

The prevalence of email makes it an obvious area of attack. And it only takes one compromised email to unleash havoc. Patient trust, reputational damage, compliance, and regulatory implications - the ramifications are severe. But it can be mitigated.

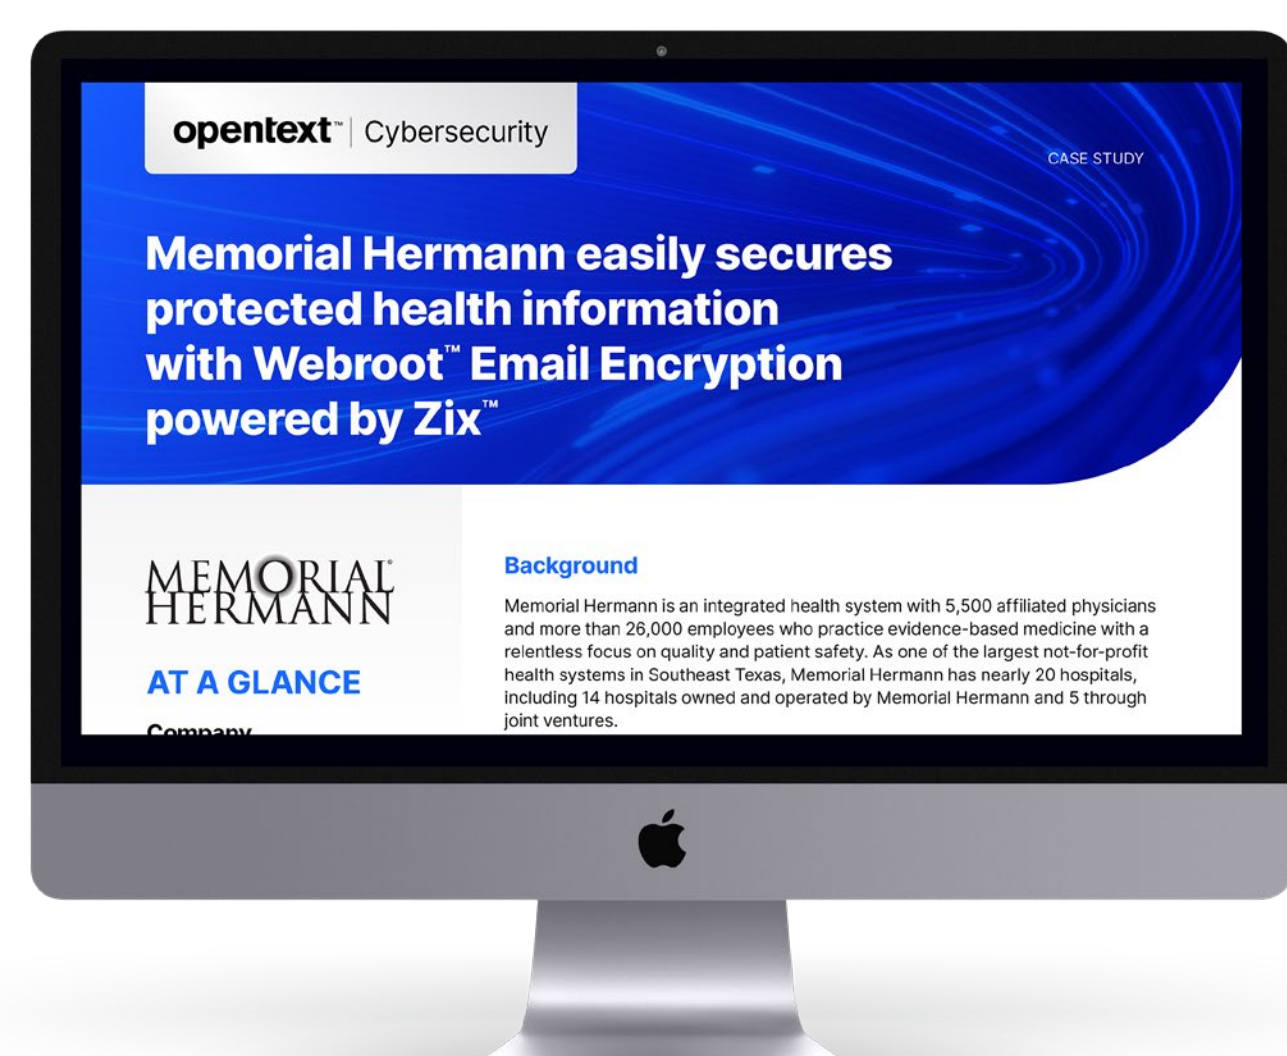

1 in 3 Americans suffered a medical data breach in 2023<sup>1</sup>

### Protect patient data (and your time) with email encryption

Email encryption shouldn't impact patient care or day-to-day operations. Nor should it be hard to implement or scale. Forget extra steps, extensions, and portals: make encryption as easy as clicking "send".

## OpenText makes email encryption effortless

OpenText Cybersecurity is a compliant turnkey solution for hassle-free email encryption. All users can send emails and share sensitive information with confidence - safe in the knowledge their communications are always sealed from prying eyes.

- Simple and non-disruptive
- Default and customizable filters, graphical reporting, and rapid set up
- Meets HIPAA, GLBA, FINRA and other regulatory compliance requirements

## Reinforce your defenses with Advanced Email Threat Protection

Combine email encryption with advanced email threat protection to harden your email security. Multilayer filtering for inbound and outbound lets safe emails flow while blocking malicious threats.

- Protects against phishing, ransomware, Business Email Compromise, impersonation and other email-borne threats
- Ensure compliance with major regulatory requirements

### Simple, smart cybersecurity done your way

A layered approach focuses on prevention, protection, and recovery. OpenText's complementary suite of cybersecurity solutions gives you everything you need to apply the layers most relevant to you.
